- 4) AIN NURNABILA BINTI MOHD AZHAR

Detail of my contribution to the group and the project work

Throughout this project, I contributed to several tasks to help achieve our goals. In Task 1, I created the detailed first-floor plan using Lucidchart, making sure it was clear and aligned with our objectives. In Task 2, I worked with Anis and Asyikin to divide and answer the questions Ain had listed. This allowed us to gather all necessary information for the analysis. For Task 3, I helped gather and compile a list of potential devices for the project. In Task 4, I focused on documenting the necessary connections, patch cords, and switch ports to ensure everything was accurate. Lastly, in Task 5, I handled the section of the report related to obtaining and documenting the IP address from the lecturer.

Detail the other members contribution to the group and the project work

For the project setup, Ain created the ground floor layout using Lucidchart after discussing it with the team, while Anis and Asyikin worked on describing the layouts for both floors. In task 2, Ain created 10 key questions to gather project requirements, and Anis and Asyikin divided the questions and answered them based on their research. For task 3, all team members helped by listing possible devices, and Syikin and I chose the best options. Task 4 is where Syikin and Anis sketched the wiring layouts for both floors to ensure proper network structure. Finally, for task 5, Anis handled subnetting the IPs, while Syikin and Ain allocated the IPs for both floors, ensuring everything was well-organized.

How I work as a group.

I played an important role in organizing and managing the early stages of our project. As the person handling task distribution, I made sure each team member had a clear and manageable role. I also contributed to the discussions on the ground and first-floor layouts, suggesting a rest area on the ground floor to improve comfort and usability. For Task 3, I led the task distribution, assigning Ain, Anis, and Asyikin to research suitable devices. I also helped gather information

and create a list of options with my teammates. We evaluated each device's features and pricing to choose the best ones for the project. Lastly, I participated in discussions to solve issues with IP addressing, helping finalize the address allocations. Overall, I contributed to planning, problem-solving, and task execution, ensuring the project stayed on track and met its objectives.

What I have learned from working as a group

First, I learned the importance of clear communication and task delegation. By ensuring that everyone understood their roles and responsibilities, we were able to work efficiently and avoid confusion. Discussing ideas and pooling our knowledge led to better decisions and more creative solutions. I also realized how essential it is to remain flexible and open to feedback. Sometimes things don't go as planned, and being able to adapt and adjust accordingly is crucial for success. Lastly, I learned that working as a team means not just focusing on individual tasks but also supporting one another, making the process more enjoyable and productive. Overall, teamwork helped me improve my problem-solving and organizational skills while fostering a sense of shared responsibility and completeness of work.

What I have learned from doing the project

From doing this project, I learned a great deal about planning, collaboration, and problem-solving. I gained a deeper understanding of how to break down a project into manageable tasks and how important it is to allocate roles effectively to ensure everything is covered. I also learned how to research and evaluate options, such as selecting the right LAN devices and understanding IP addressing schemes, which gave me more technical insight into network design. Working through challenges, like dealing with wiring layouts and ensuring everything was well-documented, taught me the importance of attention to detail.

Comments and suggestions on the project

Overall, the project was well-organized, and each team member contributed effectively to the different tasks. The collaborative approach to selecting devices and discussing layouts was productive, ensuring we covered all necessary aspects. I also think that it would be useful to incorporate more testing of the network setup, particularly for the LAN and WAN connections, to ensure everything functions as expected before the final implementation.
