Faculty Hosts Inspiring Technopreneurship Seminar Featuring Industry Leaders and Career Opportunities

SKUDAI, June 2024 — The Technopreneurship Seminar themed “Empowering Innovation Through Emerging Technologies” was successfully held on 26th June 2025 at N28a, Faculty of Computing, Universiti Teknologi Malaysia (UTM). The event featured engaging talks from industry leaders including HUAWEI, DF Automation & Robotics, and TG Human Resource Management Services, alongside meet-and-greet sessions with experts, interview opportunities, industry showcases, and a lively atmosphere enhanced by food trucks and hands-on exposure for students.

Technopreneurship Seminar event on June 26, 2025 in N28a Faculty of Computing

Students of Technopreneurship course, which is part of the Faculty of Computing, Universiti Teknologi Malaysia's (UTM) organized the Technopreneurship Seminar event. The seminar's main goals were to introduce students to the practical uses of cutting-edge technologies and to foster entrepreneurial thinking by bringing them into close contact with

business leaders. The event provided an enriching venue for learning from successful organizations, exploring career options, and engaging in meaningful industry discourse. Targeted at undergraduate students, academic staff, and aspiring technopreneurs, the event offered an enriching platform to learn from successful companies, explore career opportunities, and engage in meaningful industry dialogue. The seminar was also meant to enhance university-industry partnership through professional networking and experiential learning activities.

The ordered list of talks by invited business executives was one of the seminar's primary features. The purpose of these sessions was to introduce students to practical perspectives on entrepreneurship, innovation and emerging technology.

Dr, Yeong Che Fai, CEO of DF Automation & Robotics

Dr. Yeong Che Fai, CEO of DF Automation & Robotics, inspired students to be creative by sharing his experiences in the robotics industry. Huawei Malaysia, Mr Chan Weng Hun emphasized how cloud and 5G technology will affect future employment. Russell

Marland , the Senior Operation Director of TG Human Resources Management, meanwhile concentrated on tech professionals' communication and personal branding abilities.

One of the most engaging segments of the Technopreneurship Seminar was the Industry Showcase and Meet-and-Greet session, which provided participants with valuable exposure to various tech-driven companies. This session created a meaningful platform for students to interact directly with industry professionals and learn about real-world applications of technology, innovation, and entrepreneurship.

Several companies were featured in this showcase, including Cyberport, Huawei, Lattel, NexScholar, RunCloud, and TG Recruitment Agency. Each brought their own unique expertise to the event. Cyberport highlighted its efforts in supporting and nurturing tech startups, offering students insight into the ecosystem of digital entrepreneurship. Huawei captivated attendees with its cutting-edge digital infrastructure solutions, emphasizing the future of connectivity. Lattel sparked creative ideas among aspiring entrepreneurs with its innovative blend of design and functionality. NexScholar introduced a modern approach to education and career development, while RunCloud demonstrated its cloud server management platform tailored for developers and businesses. TG Recruitment Agency, on the other hand, provided practical advice on aligning skills with industry needs, especially for those preparing to enter the job market.

The showcase was more than just a networking opportunity. It was a bridge between academic learning and industry expectations. Students were able to ask questions, seek guidance, and gain valuable insights into the realities of the professional world. This feedback reflects the positive impact and relevance of the showcase in helping students envision their future paths within the tech and entrepreneurial space.

Showcase by Lattel Robotics

The impact of discussions was felt through the encouraging energy and useful messages delivered by each speaker, even if not all students were able to attend every session. Third-year student, Aina stated *“Meeting actual founders and learning about the process of starting a business was eye-opening!”*

The Technopreneurship Seminar had interesting talks, networking opportunities in the industry, and a fun outdoor area with food trucks and active booths. These components gave all of them a vibrant, relaxed vibe, establishing a place where students could unwind, socialize, and recharge between classes.

Long lines of people were drawn to the event by the amount of food trucks outside. Together with the wonderful weather and sounds, the delicious food promoted longer student stays and unexpected discussions between skilled and peers.

In the meantime, tech groups and student-led groups put up engagement stands where they displayed creative student projects, played minigames, and distributed information about opportunities related to entrepreneurship. In addition to bringing color to the rare occasions, these booths gave students a convenient way to share their ideas and interact directly with the seminar's theme.

“It felt like a campus carnival with a professional twist,” said Alya, a third-year student. “We got to learn, network, and have fun all in one day.”

Students were exposed to real-world entrepreneurial knowledge, job opportunities, and innovation displays during the Technopreneurship Seminar 2025, which effectively closed the gap between business and academia. The event's well-rounded experience, which included networking opportunities, interactive displays, professional speakers, and lively social settings, made an indelible mark on guests.

In order to make the next version of the seminar better, the organizing team will be collecting participant input. It is expected that the seminar will continue to develop as a significant yearly event, developing the next generation of technopreneurs at UTM, given the enthusiastic response and active participation seen this year.

The seminar provided valuable interview opportunities for students to connect directly with industry leaders and explore potential career paths. Companies such as DF Automation & Robotics Sdn Bhd, Huawei Malaysia, Kestrl, and TG Human Resource Management Sdn Bhd offered insights into their recruitment processes and available internships. Students actively participated in these sessions, gaining first hand advice on resume building, skill development, and industry expectations.

“The interview segment helped me understand what employers look for in candidates,” shared Ahmad, a second-year engineering student. Another attendee, Sarah from the Faculty of Computing, added, “Networking with professionals from Huawei opened doors I didn’t know existed.” These interactions not only boosted students’ confidence but also laid the groundwork for future internships and collaborations.

Students are engaging with Huawei’s recruitment team at the seminar booth.

🌟 Happy to have contributed to the Technopreneurship Seminar: Empowering Innovation Through Emerging Technologies, which took place at the UTM Faculty of Computing on June 26, 2025.

As a member of the Marketing Team in Branding and Design Team, my partner and I were responsible for creating the official event banner and any supplementary images used in promotional materials. This experience encouraged me to employ both strategic and creative thinking to ensure the images not only looked excellent but also effectively conveyed the concept and attracted attention.

I gained knowledge about:

- 🎯 The effectiveness of visual branding in event engagement
- 🗣️ How to collaborate with a team under pressure
- 🏢 The significance of uniformity in promotional materials

I'm appreciative of the opportunity and honoured to have helped organize a gathering that brought students and actual business professionals together. This was about making an impression, not simply about design.
