WHAT IS SAP

• Introduction to SAP ERP

- SAP ERP (Enterprise Resource Planning) integrates all key business functions into a single centralized system.
- It connects departments such as finance, sales, production, and HR for seamless data sharing.
- Provides real-time visibility into operations and supports better decision-making.
- Reduces duplication, improves efficiency, and standardizes business processes across the organization.

Discover SAP S/4HANA

- SAP S/4HANA is the next-generation ERP system built on the HANA in-memory database.
- Delivers real-time data processing, advanced analytics, and simplified workflows.
- Features a modern user interface (SAP Fiori) for better user experience.
- Helps organizations achieve faster performance, smarter insights, and digital transformation.

Introduction to SAP Business Technology Platform (BTP)

- SAP BTP is a cloud-based platform that combines data management, analytics, and application development.
- Enables integration between SAP and non-SAP systems in one environment.
- Supports building and extending applications quickly using cloud tools.
- Provides the foundation for data-driven innovation and intelligent enterprise solutions.

EXPLORING SAP

Order-to-Cash (O2C) Process

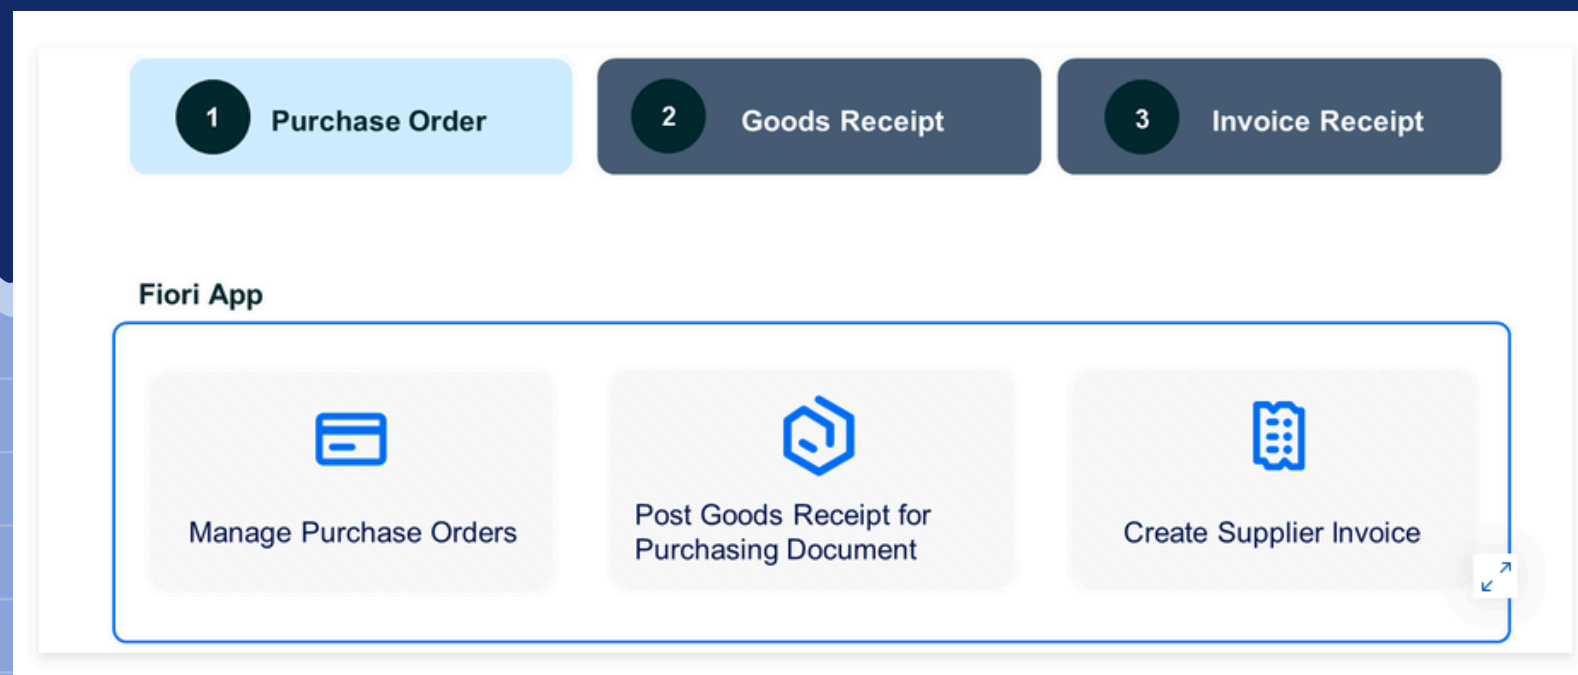

Covers all steps from receiving customer orders to collecting payment. Involves order creation, product delivery, billing, and financial posting.

Importance:

- Enhances customer satisfaction with efficient order processing.
- Provides real-time financial and inventory updates.
- Improves revenue tracking and performance reporting.

EXPLORING SAP

Procure-to-Pay (P2P) Process

This process covers all steps from purchasing materials to paying the vendor. This process starts from purchase requisition, purchase order creation, goods receipt, and invoice verification, ending with vendor payment.

Importance:

- Ensures smooth supply chain operations.
- Integrates material management and finance for accurate budgeting.
- Reduces manual errors through automation.

EXPLORING PPG

PPG OVERVIEW

Mission: "We protect and beautify the world."

Vision: Be the first-choice partner to meet our customers' evolving needs for innovative paints, coatings and specialty materials.

KEY OBSERVATIONS

innovation

- Inside the can: They improve their paints and coatings using advanced chemistry.
- Outside the can: They use digital tools, automation, and AI to make manufacturing and customer processes faster and more efficient.
- Examples include automated mixing systems (like PPG LINQ™ and PPG MOONWALK®) and smart coating technology that makes application easier and more sustainable.

Sustainability

- PPG aims to protect and beautify the world through products that are good for people and the planet.
- Their goal: 50% of total sales from sustainable products by 2030 (in 2024 they achieved 41%).
- Sustainability is part of how they innovate, operate, and grow, focusing on:
 - Reducing waste, energy use, and emissions
 - Using renewable resources
 - Supporting safe workplaces and vibrant communities

PPG BUSINESS CONTEXT (refer example in slide 3)

At PPG, this process can be seen in their automotive or industrial coatings operations where digital tools and ERP systems help manage customer orders globally.

“PPG Order-to-Cash (O2C) in a Digital Manufacturing Context”

 Sales →  Production →  Manufacturing →  Delivery →  Payment

SAP
vs
PPG
Digital
Business
Model

ASPECT	SAP ENTERPRISE SYSTEM	PPG DIGITAL BUSINESS MODEL
MAIN FOCUS	Integrates business processes in one system.	Uses digital tools for smart and sustainable operations.
TECHNOLOGY	ERP modules (sales, production, finance).	AI, automation, and smart manufacturing.
GOAL	Improve efficiency and data accuracy.	Improve innovation and environmental impact.
EXAMPLE	“Order-to-Cash” , automates order to payment.	Digital color matching & energy-saving production.

THANK YOU
